

MAKE A DIFFERENCE. VOLUNTEER FOR A LYME DISEASE VACCINE STUDY.

**A NEW LYME DISEASE VACCINE STUDY IS UNDERWAY.
LEARN MORE TO SEE IF YOU MAY QUALIFY.**

Lyme disease is a tick-borne illness that can cause serious long-term symptoms if left untreated

Lyme disease is caused by bacteria transmitted through tick bites

People who participate in outdoor activities or jobs are at higher risk of Lyme disease

Lyme disease can cause skin rashes, fever, chills, fatigue, joint and muscle pain, paralysis, and other longer-term outcomes if left untreated

Currently, there are no approved vaccines available to prevent Lyme disease in people exposed to ticks that carry Lyme disease. This clinical trial will evaluate if an investigational (study) vaccine is safe and effective in preventing Lyme disease. By choosing to volunteer, you will represent others like you – in age, race, ethnicity, and from communities like yours.

This study may be an option for healthy adults and children over 5 who live in areas where ticks that carry Lyme disease are found and frequently participate in activities that may put them in contact with ticks:

- ✓ Outdoor occupations such as landscaping, forestry, or wildlife and parks management
- ✓ Frequent outdoor recreational activities such as hiking, camping, fishing, hunting, or gardening
- ✓ Living in or frequently visiting wooded areas, tree lines, tall grass, open fields, lake sides, or riversides
- ✓ Owning a pet that may return from outdoors with attached ticks

Note: These are not the only eligibility criteria for this clinical research study. A clinical research team member will help determine if this study is right for you based on all participation criteria.

Joining a clinical trial is an important and personal decision. We hope it is one you will consider.
